### What institutions offer occupational health and safety (OH&S) courses in Canada?

The following tables summarize various OHS programs offered in colleges and universities across Canada (listed from west to east). Since there may be other institutions offering similar courses that are not listed below, you should contact your local colleges and universities to find out if they offer a program that will meet your needs.

Within these listings, we have included the availability (full-time, part-time, and/or distance). Program availability may be subject to change. Please view the program website and contact the school to confirm.

The Board of Canadian Registered Safety Professionals (BCRSP) has also released a list of educational institutions that meet the criteria for CRST® and CRSP® eligibility. For the most updated list, please [BCRSP](#).

We have included these references and schools as a means of providing a potentially useful referral. You should contact the school directly for more information. Please note that mention of these schools does not represent a recommendation or endorsement by CCOHS of these schools over others of which you may be aware.

Other programs like labour and workplace studies or engineering programs may have occupational health and safety components but do not provide an OHS certificate. These programs and others that provide specialized courses like human factors, ergonomics, occupational health nursing or occupational medicine are not included in this list.
